

About Fortify Software Documentation

First, congratulations on acquiring the latest Fortify Software products. You will notice that, apart from the *Micro Focus Fortify Static Code Analyzer Custom Rules Guide*, the software downloads for this release contain no product documentation. Previously, Fortify bundled its documents with the software and provided updated guides on the Protect724 website. To provide you with only the very latest product documentation, Fortify now makes documentation available on the Micro Focus Product Documentation website (<https://www.microfocus.com/support-and-services/documentation>).

Please note that the *Micro Focus Fortify Static Code Analyzer Custom Rules Guide* is not available on the Micro Focus Product Documentation website. That document is included with the product download and is available from support.

Getting Fortify Product Documentation

You can find the Micro Focus Fortify product documentation at <https://www.microfocus.com/support-and-services/documentation>. There, you can search for a product by selecting one from the list or by typing in the product name.

Apart from the *Release Notes*, all guides are available in both PDF and HTML formats. Product help is available within the WebInspect products.

Products Available from Other Marketplaces

Micro Focus Fortify Security Assistant Extension for Visual Studio

The Security Assistant Extension for Visual Studio provides a lightweight installer that's integrated directly into your Visual Studio IDE. It leverages Visual Studio's Error List and other VS components to help you find security issues as you type code. You can use it to analyze a file or an entire solution. The Security Assistant Extension is a lightweight, real-time code checker that developers can use to find a significant portion of issues before they check in code to source control, where it can be subject to more rigorous checks by more robust tools such as Fortify Static Code Analyzer. The Security Assistant Extension uses Rulepacks that are curated specifically for Visual Studio. These Rulepacks include both structural and configuration rules that have been tuned to detect high-likelihood issues (and a corresponding low incidence of uninteresting findings).

Demo: <https://www.youtube.com/watch?v=7CfeUXtDlwQ&t=137s>

You can get the Fortify Security Assistant extension from [Microsoft's Visual Studio marketplace](https://marketplace.visualstudio.com/items/fortifyvsts.fortify-security-assistant-visual-studio/license). You can access the Micro Focus end user license agreement from <https://marketplace.visualstudio.com/items/fortifyvsts.fortify-security-assistant-visual-studio/license>.

Fortify Security Assistant for Eclipse

Fortify Security Assistant for Eclipse integrates with the Eclipse Java development environment. It works with the Fortify security content to provide alerts to potential security issues as you write your Java code. Security Assistant for Eclipse provides detailed information about security risks and recommendations on how to secure potential vulnerabilities. It can detect:

- Potentially dangerous uses of functions and APIs
- Issues caused by tainted data reaching vulnerable functions and APIs at the intra-class level

You can download the Fortify Security Assistant for Eclipse software from the [Fortify Marketplace](#) and access the product documentation at <https://www.microfocus.com/support-and-services/documentation/>.

Fortify Plugin for Bamboo

Use the Micro Focus Fortify Bamboo Plugin in your continuous integration builds to identify security issues in your source code with Micro Focus Fortify Static Code Analyzer. After the Fortify Static Code Analyzer analysis is complete, you can upload the results to Fortify Software Security Center.

With the Fortify Plugin for Bamboo, you can integrate Fortify Static Code Analyzer with the following build tools:

- Gradle
- Maven
- MSBuild
- Visual Studio (devenv)

You can also scan your source code directly without a build tool.

The Fortify Bamboo extension is available through the [Atlassian Marketplace](#). From the marketplace, search for Fortify to locate the software and a link to the documentation. To see a demo of how to install, configure, and use the plugin, see <https://marketplace.atlassian.com/apps/1218529/fortify-app-for-bamboo?hosting=server&tab=overview>.

We Welcome Your Feedback

If you have comments or suggestions, you can send these to the documentation team at FortifyDocTeam@microfocus.com. Please use the subject line "Feedback on <Document_Title> <Product_Version>." We appreciate your feedback!
